

# X-ROAD

## COMMUNITY EVENT

**TALLINN, 12<sup>TH</sup> SEPTEMBER 2018**

Jun 29, 2018 11:34 EEST

## **Global X-Road technology event to take place in Tallinn, Estonia**

X-Road, the data exchange layer for information systems, is a technological and organizational environment enabling a secure Internet-based data exchange between information systems. The X-Road technology is used nationwide in the Estonian X-tee and in the Suomi.fi Data Exchange Layer service.

The X-Road Community Event is aimed for anyone interested in the X-Road – users consuming or producing services by using the X-Road, developers of the X-Road open source software or related components, operators of X-Road environments or servers, and decision-makers and e-governance experts interested in the X-Road.

The global X-Road Community has members from 11 different time zones and there are over 30 countries currently considering, studying or implementing the X-Road or related technologies.

"There has been an annual joint X-Road event organized between Estonia and Finland. Now it was time to have an international flagship event for X-Road enthusiasts around the world", says Ville Sirviö, CEO of the Nordic Institute for Interoperability Solutions (NIIS) that is organizer of the event.

The X-Road Community Event takes place in Swissôtel Tallinn on 12th September 2018. The organizers are expecting 200 participants from around the world to arrive.

---

The Nordic Institute for Interoperability Solutions (NIIS) is an association founded jointly by Finland and Estonia. Its mission is to develop e-governance solutions, kicking off with the X-Road technology used nationwide in the Estonian public administration and in the Suomi.fi Data Exchange Layer service.
